

Diane Simpson: cover-ups

DIANE SIMPSON: COVER-UPS, on view at Alfedena Gallery in Chicago (September 5–October 11, 2008) challenged our usual notion of women's clothing as a self-expressive decorative scrim worn close to the skin for the purpose of adornment and beautification.

In contrast, Simpson's fabric constructions are more like body armor or ecclesiastical vestments. They seem like shields or shelters, meant both to protect and to confer a kind of official power upon the wearer. The protection offered is more symbolic than physical though. Made from a quirky mix of materials that range from the domestic to the industrial—*Bib (quilted)* combines vinyl, felt, waxed thread, and aluminum—Simpson's constructions blend delicacy with toughness. Others, like *Work Belt*, fashioned from corrugated plastic and electrical cord in the approximate shape of a kitchen apron, blur gender roles to lend the frail human form an authority missing from ordinary garb.

A work like *Tunic* seems inspired by kimonos, its flat boxy shape recalling the unisex design of those garments. Others, like *Vest*, with its tapered waist and sheer lacy

fabric stretched over an aluminum frame, seem intended for the female form. Designed to reveal and expose even as it contains and conceals, this provocative object looks like a diaphanous shield and calls to mind lingerie and corsetry, which, after all, are their own kind of armor.

Displayed alongside some of Simpson's *cover-ups* were structural drawings on graph paper that looked more like architectural renderings than dress patterns and lent gravity to the work by supporting its purposefulness and solidity. Simpson is as much a sculptor as she is a fiber artist, and what the drawings don't show is how she assembles her works, using techniques as diverse as riveting metal, wrapping fabric, lacing electrical cord through scored and
