POOL PLASTER VIEWING AGREEMENT

Leisure Pools, Inc strongly recommends viewing pools that match the plaster type (ie. Marcite, Pebblefina™, Pebbletec™ or PebbleSheen™ and color you are deciding to apply on your new pool, prior to scheduling a plaster date.

By viewing pools you will gain a better understanding of the natural irregularities (i.e. Color variation, mottling, shading, streaks, blotches, crazing, and unevenness of color) that is inherent in all pool plaster products we offer.

Because pool plaster is always interacting with the surrounding water and harsh pool chemicals, it is possible that the appearance of the surface will change, either slowly over time, or in rare instances, far more rapidly. The importance of balanced water chemistry cannot be overstated in its role to maintaining the appearance of quality on your plaster finish. Please consult your pool care professional to establish a plan to maintain your new plaster finish.

It is important to recognize that none of the irregularities stated above are due to structural weakness or poor application. Please read the attached, *NPC-Selecting the Proper Pool Finish*. This will provide a more thorough explanation for the above information.

Homeowner has read and accepts the above conditions and agrees to view other pools prior to plastering pool, or not, and therefore, accepts the outcome of their plaster job upon completion.
